

## Overview

TPS offers as-needed or contract employee support to clients who are seeking to develop, maintain, or improve their environmental protection efforts. An Environmental Management System, or EMS, provides a systematic approach for a business to establish its environmental policy and objectives, monitor its performance, and detect potential concerns before they become problems. Whether or not this involves certification to the ISO 14001 Environmental Management Standard, an EMS can significantly improve regulatory compliance, enhance your market or image potential, help to reduce environmental liabilities, conserve raw materials and energy, and reduce control pollution-related costs.

*Unlike many larger consulting firms, TPS offers customized and cost-effective services to fit your particular business needs.*

Environmental stewardship has become integral to business success for companies and public agencies of all sizes. Customers and the community are increasingly more interested in products and services offered by companies that can demonstrate a strong commitment to environmental protection. An EMS, particularly one that is certified by a third-party, can help demonstrate this commitment.

## The ISO 14000 Standards

The International Organization for Standardization (ISO) 14000 series is the most widely-recognized standard for establishing an EMS.

The ISO 14001 standard specifies a framework of control for an EMS against which an organization can be certified. An independent assessment of your EMS is not only an excellent means of ensuring your efforts are meeting goals, but it also sends a clear message to stakeholders and regulatory agencies that you have adopted good environmental practices.

## Clients Benefits

- ▶ Improved environmental performance and compliance.
- ▶ Increased efficiency and cost savings.
- ▶ Improved employee awareness and participation.
- ▶ Improved predictability in managing environmental obligations.
- ▶ Effective targeting of resources.
- ▶ Enhanced reputation and image with stakeholders.

## Our Advantage

TPS has proven experience in helping our clients develop and implement an EMS that conforms to ISO 14001. Unique among consultants, we have the experience in developing EMS solutions and also with the specific challenges of day-to-day implementation and management

TPS can integrate other EH&S programs into the EMS structure to extend the benefits to safety and health programs. In many cases, we can offer proven templates for developing the necessary documentation that can be customized to fit your needs - all at significant savings in both time and costs than if developed from scratch.

*TPS' extensive EH&S management experience can be leveraged to provide cost-effective solutions that allow employees to focus on the core business interests.*

We strive to leverage existing experience and knowledge, and to import ideas and processes from other similar applications that can serve as a basis for developing practical and functional programs that maximize employee "ownership" - all at a fraction of the time and cost of starting from scratch.
